

One Instrument

Multiple Tank Data Solutions

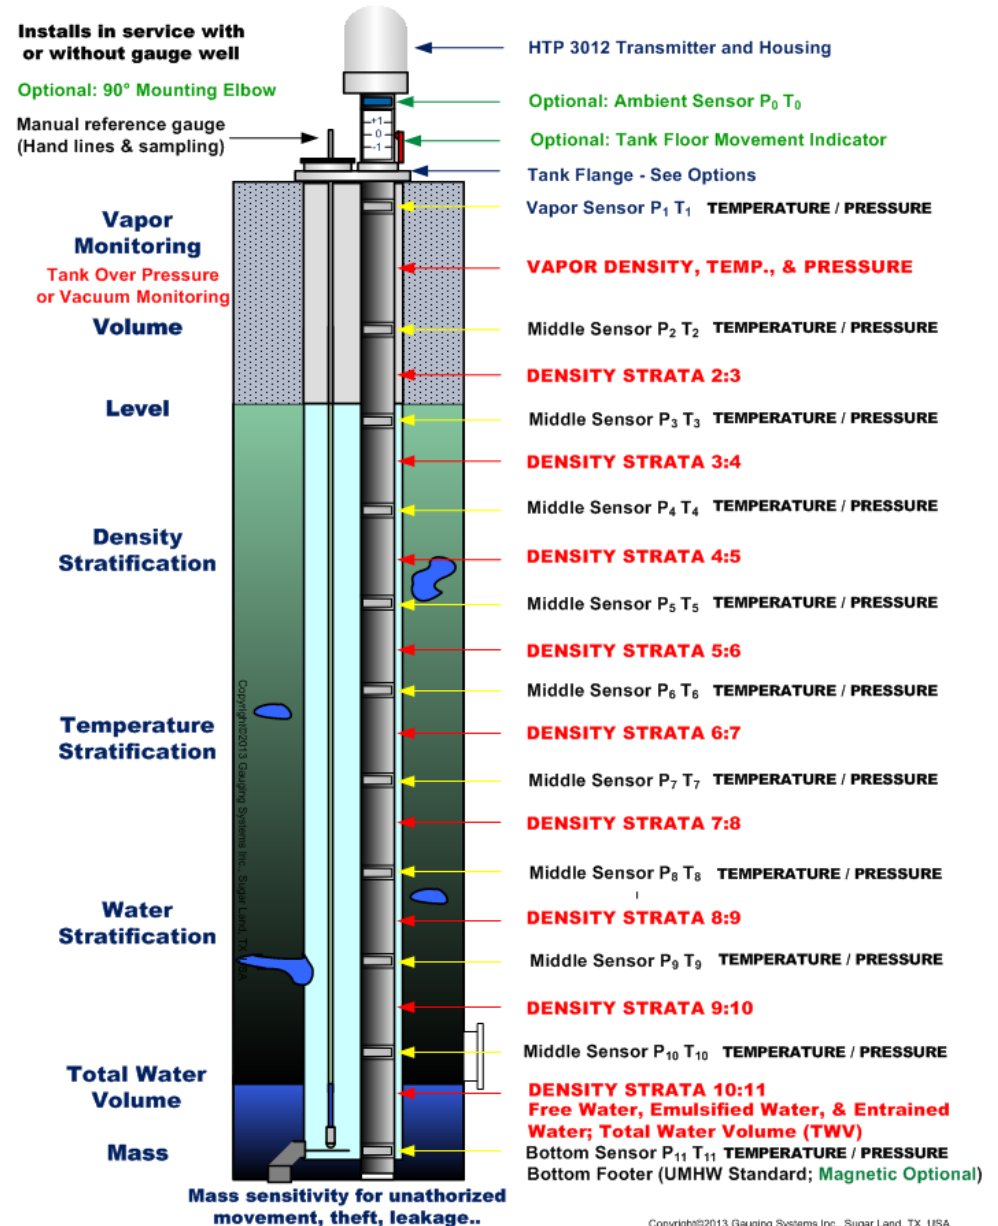

The MTG is the only tank gauge (single instrument) to provide all necessary data to calculate volume in real time from the gauge directly. (Hybrid or Hydrostatic Methods)

The MTG™ 3012 transmitter supports international standards including API, ISO, GOST, OIML, etc. and over 1,000 point capacity tables (strapping points). MTG provides raw measured and calculated data within the transmitters and diagnostic information.

The MTG is the only engineered instrument that provides multiple applications capabilities from one device.

- Inventory Management - Product Volume & Quality
- Unauthorized Movement by Mass Sensitivity (Leak Detection, Miss Lineups and Theft Protection)
- Vapor Emissions Monitoring (Over and Under Vapor Pressure)
- Overfill Protection (MTG 3018 or 3024)
- Bottom Movement Monitoring
- Ability of Monitoring Stratification of Temperature, Density, and Water.
 - Mixing and Blending
 - Total Water
 - Inverse Water
 - Over Heating
- Etc.
